## LESSONS LEARNED

### Benefits:

Non-verbal information (facial expressions, body language, etc.)

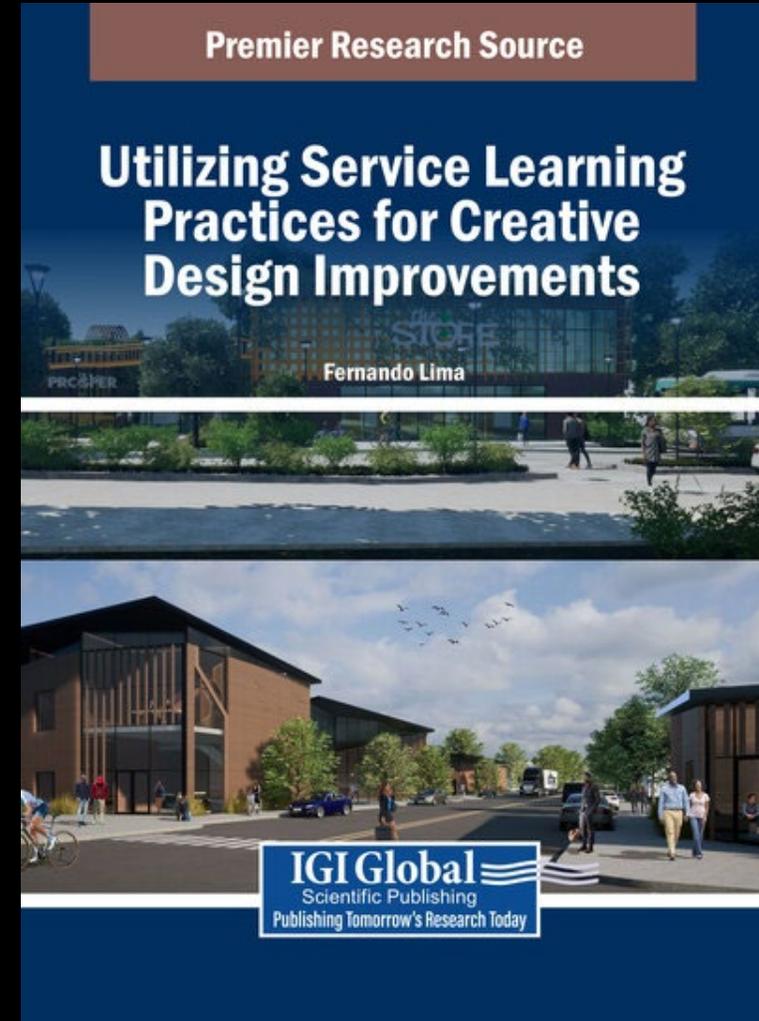

Human-centric inputs

### Challenges:

Time consuming data collection

Labor intensive data analysis

Complicated review and compilation of data for scholarship use

### Published book chapter:

*The Link: A Collaborative Project Approach to Design Thinking as Service-Learning and Advocacy*

# BDC: STUDENT SURVEYS

## **Studio Signals**

Designed for Reflection. Built for Growth.

Welcome to the **Studio Signals** data tracker.

This tool is designed to gather your insights on both personal and team dynamics within the context of this course. Your honest feedback will help us better understand individual experiences

as well as how teams function and collaborate.

Please answer each question thoughtfully and candidly—there are no right or wrong answers.

Thank you for your participation!

## PERSONAL DYNAMICS

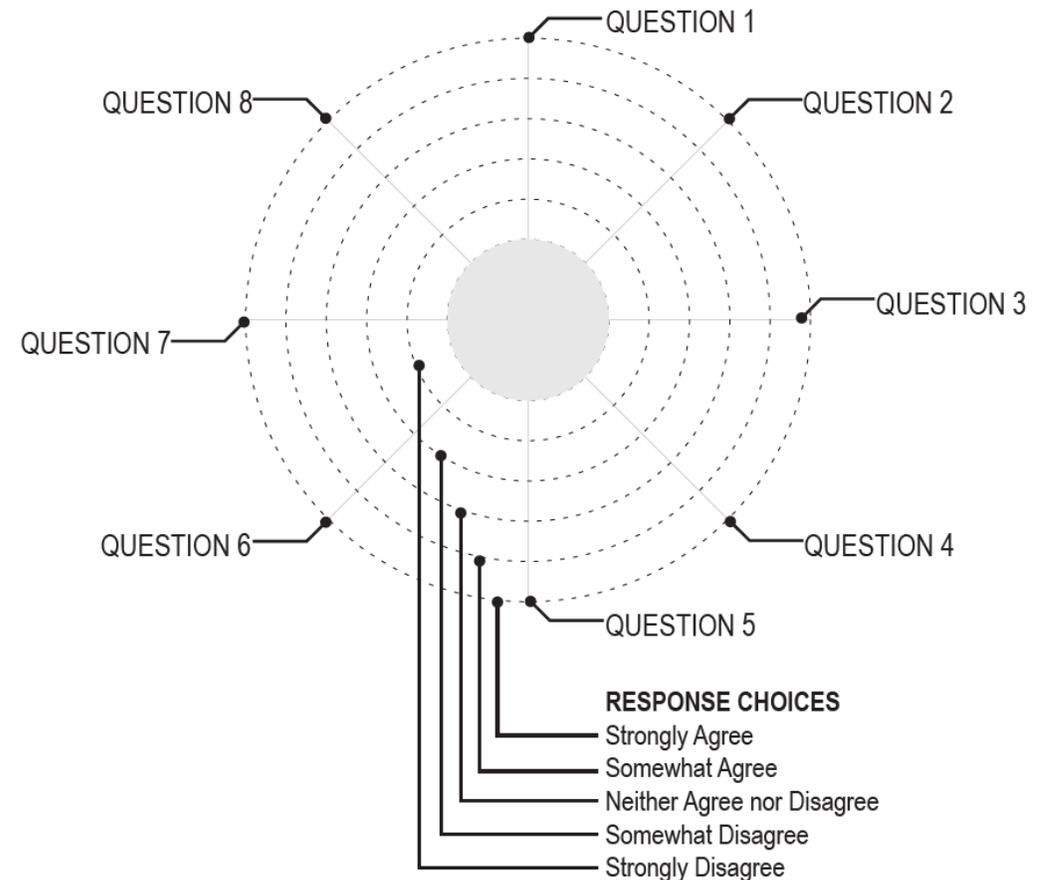

The survey below was distributed to students at nine different points throughout the semester, following major project milestones. The data collected from the Personal Dynamics Survey measured self-awareness, growth, and personal behaviors.

- 1 “I am staying on top of my individual project tasks and deadlines this week.”  
(Quantifies personal time management and accountability.)
- 2 “I have managed my coursework in other classes in a way that supports my ability to contribute meaningfully to the project.”  
(Assesses impact of academic time management on project performance.)
- 3 “I have managed my social/non-academic commitments in a way that supports my ability to contribute meaningfully to the project.”  
(Assesses impact of social time management on project performance.)
- 4 “I am making a conscious effort to understand and consider perspectives outside of my own discipline.”  
(Measures intentionality in cross-disciplinary engagement.)
- 5 “I am aware of how my behavior and communication are impacting team dynamics.”  
(Measures social/emotional intelligence and self-awareness.)
- 6 “I am proud of the quality of my work on the project this week.”  
(Measures personal satisfaction with project performance)
- 7 “I feel mentally and emotionally balanced in my approach to the project this week.”  
(Measures mental health and focus)
- 8 “I feel this course challenges me and supports meaningful learning.”  
(Measures perceived learning)

## PERSONAL DYNAMICS

The survey below was distributed to students at nine different points throughout the semester, following major project milestones. The data collected from the Personal Dynamics Survey measured self-awareness, growth, and personal behaviors.

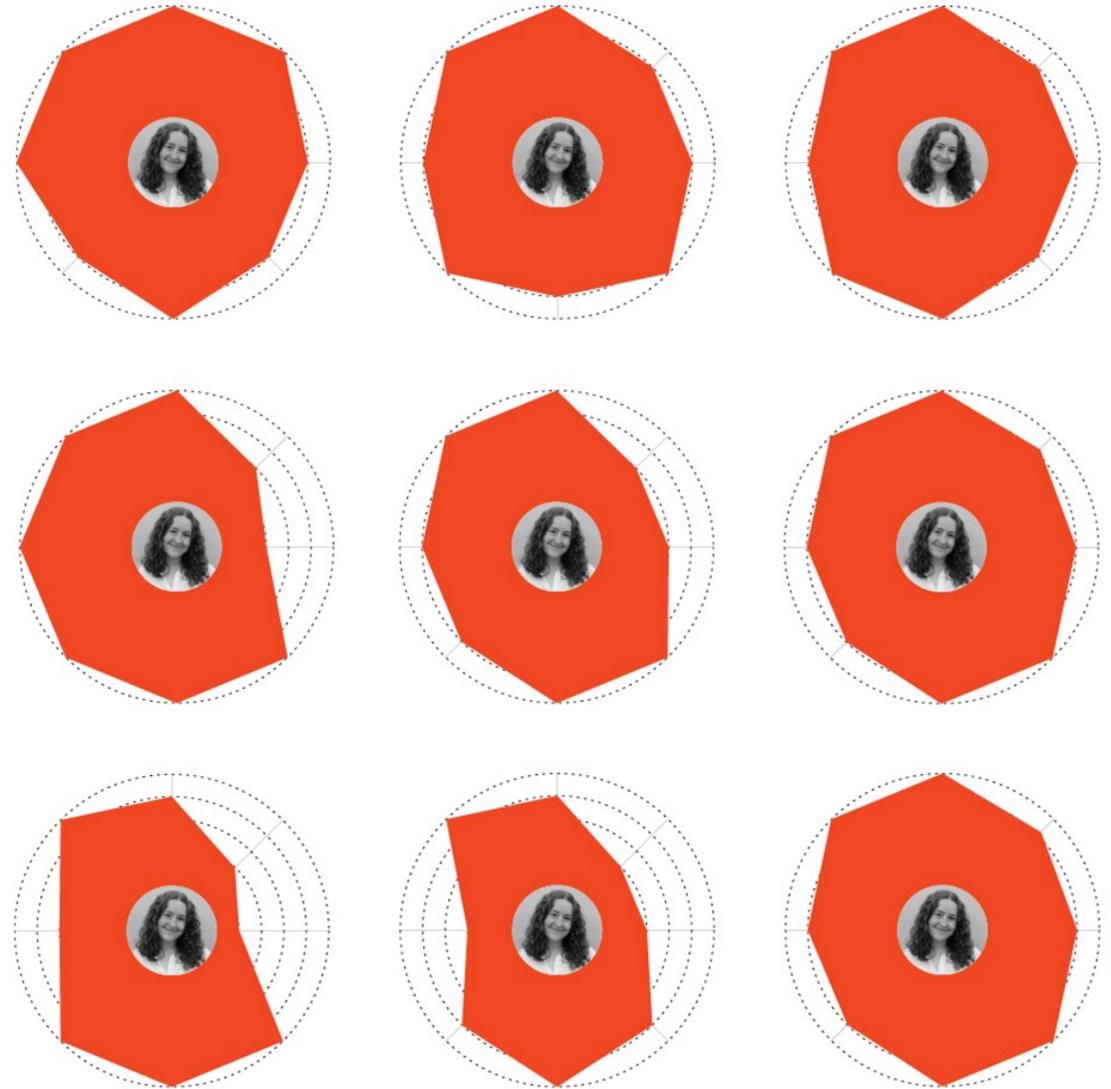

- 1 "I am staying on top of my individual project tasks and deadlines this week."  
(Quantifies personal time management and accountability.)
- 2 "I have managed my coursework in other classes in a way that supports my ability to contribute meaningfully to the project."

(Measures mental health and focus)
- 8 "I feel this course challenges me and supports meaningful learning."  
(Measures perceived learning)

## TEAM DYNAMICS

The Team Dynamics information gathered from each of the nine surveys throughout the semester is reflected in the time-series trend graphs below, which utilize the data to develop Team Averages for each collection point, with the Class Averages overlaid for comparison.

- 1 “Our team communicates clearly and effectively.”  
(Measures quality of team communication.)
- 2 “Our team is able to work through conflict/disagreements in a healthy, productive way.”  
(Measures teamwork and conflict resolution.)
- 3 “Everyone on the team understands their role and responsibilities this week.”  
(Measures alignment and task clarity.)
- 4 “Work is being distributed fairly among team members.”  
(Measures parity and balance within the team.)
- 5 “Our team values and integrates input from all disciplines represented.”  
(Measures cross-disciplinary integration and respect.)

## COLLABORATION: DATA ANALYTICS

**PURPOSE**  
The purpose of this dashboard is to provide a comprehensive overview of the project's progress, team dynamics, and data analytics. It is designed to be user-friendly and easy to navigate, allowing users to quickly access the information they need.

**DATA COLLECTION: PERSONAL DYNAMICS**  
The data collection process involves gathering information from various sources, including team members, project documents, and external data. This information is then analyzed to identify trends and patterns in team dynamics and project performance.

**PERSONAL DYNAMICS: DATA CLUSTERS**  
The data clusters represent different groups of team members or project phases. These clusters are used to analyze the interactions and relationships within each group, providing insights into the overall team dynamics.

**OBSERVATIONS & CONCLUSIONS**  
Based on the data analysis, several key observations have been made regarding team dynamics and project progress. These observations provide valuable insights into the strengths and weaknesses of the team and offer recommendations for improvement.

**AI PROMPT**  
The AI prompt is a set of instructions that guides the AI in generating the report. It includes details about the project, the team, and the specific information that needs to be included in the report.

**TEAM DYNAMICS**  
The team dynamics section provides an overview of the team's structure, roles, and interactions. It includes information about the team's composition, the roles of individual team members, and the overall team culture.

**PERSONAL DYNAMICS**  
The personal dynamics section focuses on the individual team members and their unique characteristics. It includes information about each team member's strengths, weaknesses, and preferences, as well as their interactions with other team members.

**DATA COLLECTION**  
The data collection section details the methods and sources used to gather information about the team and the project. It includes information about the data collection process, the types of data collected, and the tools and techniques used for data analysis.

**PERSONAL DYNAMICS: DATA CLUSTERS**  
The personal dynamics data clusters section provides a detailed analysis of the interactions and relationships within different groups of team members. It includes information about the composition of each cluster, the types of interactions that occur within each cluster, and the overall impact of these interactions on the team's performance.

**OBSERVATIONS & CONCLUSIONS**  
The observations and conclusions section summarizes the key findings of the data analysis and provides recommendations for improving team dynamics and project performance. It includes information about the strengths and weaknesses of the team, the challenges that the team is facing, and the strategies that can be used to overcome these challenges.

**AI PROMPT**  
The AI prompt section provides a detailed description of the instructions that were used to generate the report. It includes information about the specific information that was requested, the format of the report, and the tools and techniques used for AI generation.

# MERGE

## COLLABORATION: DATA ANALYTICS

**PURPOSE**  
The purpose of this report is to analyze the performance of the Merge team during the semester. The report will provide a comprehensive overview of the team's strengths, weaknesses, and areas for improvement. It will also identify key milestones and deadlines that have impacted the team's progress.

**DATA COLLECTION: TEAM DYNAMICS**  
The data for this report was collected through a series of team meetings, surveys, and observations. The data was analyzed using a combination of qualitative and quantitative methods to identify trends and patterns in team behavior.

**PERSONAL DYNAMICS: DATA CLUSTERS**  
The data was analyzed to identify clusters of team members who exhibit similar behaviors and characteristics. These clusters were used to understand the individual contributions of team members and how they interacted with each other.

**OBSERVATIONS & CONCLUSIONS**  
The observations made during the semester indicate that the Merge team is a highly collaborative and motivated group. The team's strengths include strong communication, effective problem-solving, and a commitment to excellence. However, there are also areas where the team needs to improve, such as time management and conflict resolution.

**AI PROMPT**  
The AI prompt used to generate this report was: "Analyze the performance of the Merge team during the semester, focusing on team dynamics, personal dynamics, and observations. Provide a comprehensive overview of the team's strengths, weaknesses, and areas for improvement. Identify key milestones and deadlines that have impacted the team's progress." The AI prompt was used to generate a detailed and structured report that provides a clear and concise overview of the team's performance.

**TEAM DYNAMICS**

1. How well do team members communicate and collaborate?
2. How well do team members manage their time and resources?
3. How well do team members resolve conflicts and disagreements?
4. How well do team members support each other and provide feedback?
5. How well do team members take ownership of their tasks and responsibilities?
6. How well do team members adapt to changes and challenges?
7. How well do team members demonstrate leadership and initiative?
8. How well do team members work together to achieve their goals?

**PERSONAL DYNAMICS**

1. How well do team members manage their time and resources?
2. How well do team members resolve conflicts and disagreements?
3. How well do team members support each other and provide feedback?
4. How well do team members take ownership of their tasks and responsibilities?
5. How well do team members adapt to changes and challenges?
6. How well do team members demonstrate leadership and initiative?
7. How well do team members work together to achieve their goals?
8. How well do team members manage their time and resources?

**CONCLUSIONS**

The Merge team has demonstrated a high level of collaboration and communication throughout the semester. The team's strengths include strong communication, effective problem-solving, and a commitment to excellence. However, there are also areas where the team needs to improve, such as time management and conflict resolution.

**RECOMMENDATIONS**

Based on the findings of this report, the following recommendations are made for the Merge team:

- 1. Improve time management and prioritization skills.
- 2. Develop strategies for resolving conflicts and disagreements.
- 3. Encourage team members to take ownership of their tasks and responsibilities.
- 4. Provide support and feedback to team members who are struggling.
- 5. Foster a positive and collaborative team culture.

### MERGE TEAM REPORT (AI GENERATED)

The Merge team has demonstrated a high level of collaboration and communication throughout the semester. The team's strengths include strong communication, effective problem-solving, and a commitment to excellence. However, there are also areas where the team needs to improve, such as time management and conflict resolution.

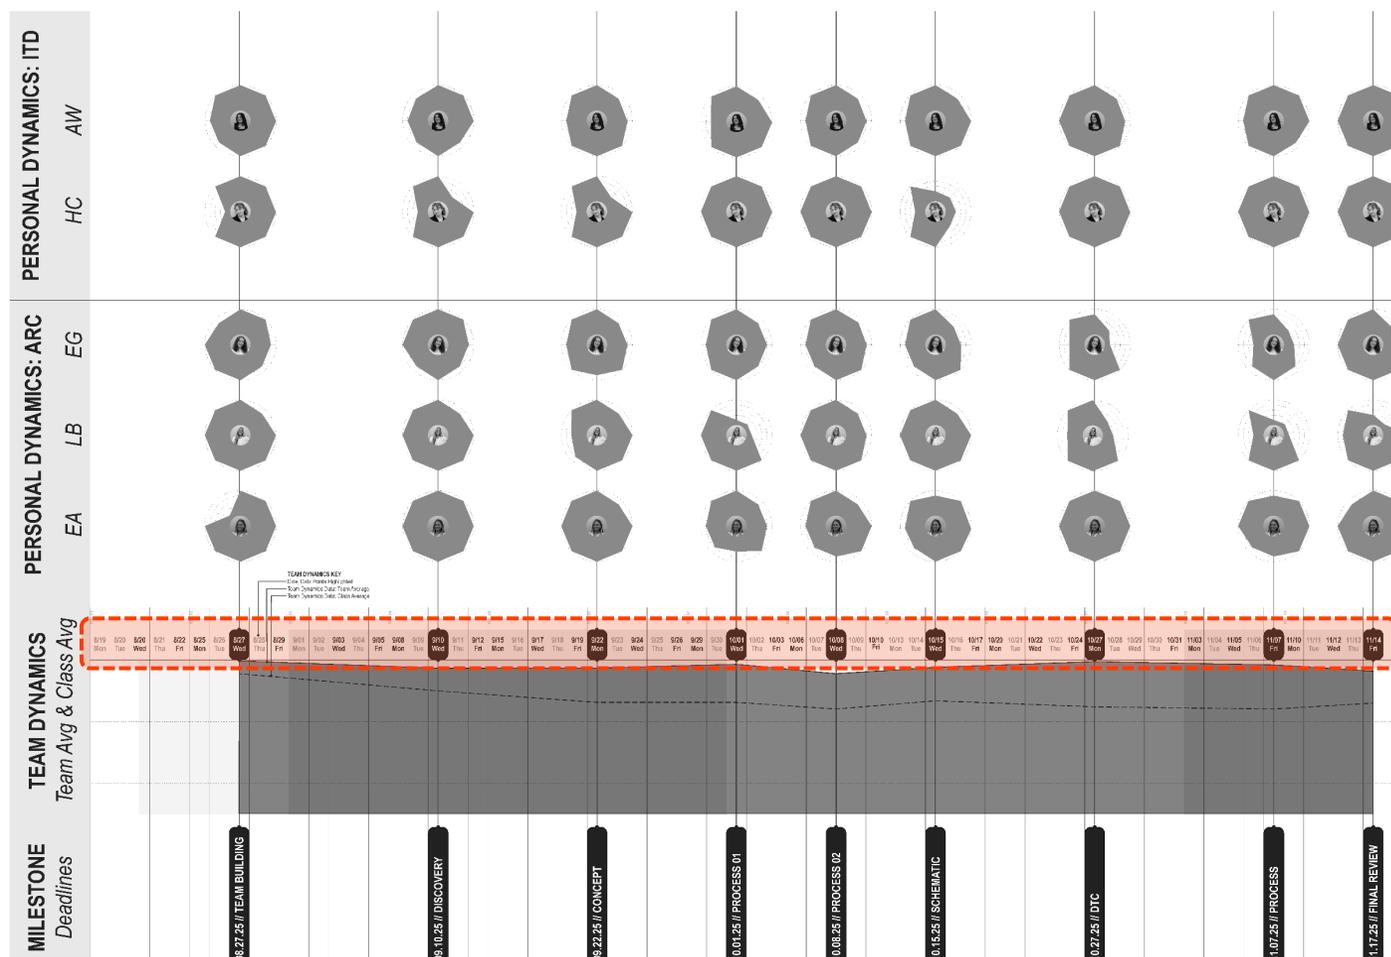

**CONCLUSIONS**

The Merge team has demonstrated a high level of collaboration and communication throughout the semester. The team's strengths include strong communication, effective problem-solving, and a commitment to excellence. However, there are also areas where the team needs to improve, such as time management and conflict resolution.

**RECOMMENDATIONS**

Based on the findings of this report, the following recommendations are made for the Merge team:

- 1. Improve time management and prioritization skills.
- 2. Develop strategies for resolving conflicts and disagreements.
- 3. Encourage team members to take ownership of their tasks and responsibilities.
- 4. Provide support and feedback to team members who are struggling.
- 5. Foster a positive and collaborative team culture.

### INDIVIDUAL STUDENT REFLECTIONS

**AMY GRISE**  
ARCHITECTURE  
11-12-2024

I thought the semester was a really interesting experience. I learned a lot about myself and my team. We worked together really well and I think we did a great job. I enjoyed the challenges we faced and the support we received from our professors. I think I grew a lot as a person and as a team member. I am proud of what we accomplished and I look forward to the future.

## Semester Schedule (Time)

# MERGE

## COLLABORATION: DATA ANALYTICS

### PURPOSE

The purpose of this report is to analyze the performance of the Merge team across various stages of the project. This includes identifying strengths, weaknesses, and areas for improvement. The data presented here is based on a comprehensive review of team activities, communication, and project outcomes.

### DATA COLLECTION: TEAM DYNAMICS

The data collection process involved a series of structured interviews and focus groups. Key areas of focus included team communication, conflict resolution, and overall team cohesion. The information gathered provides a detailed view of the team's internal dynamics and how they impact project performance.

### PERSONAL DYNAMICS: PERSONAL DYNAMICS

Personal dynamics refer to the individual characteristics and behaviors of team members. This section explores how these personal factors influence team interactions and project outcomes. Key areas of interest include communication styles, work preferences, and conflict resolution strategies.

### PERSONAL DYNAMICS: DATA CLUSTERS

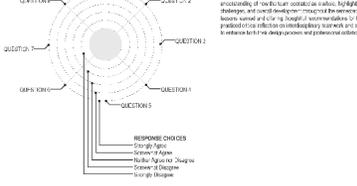

Data clusters are used to identify patterns and trends within the personal dynamics data. This analysis helps to group individuals with similar characteristics and behaviors, providing insights into how these groups interact and contribute to the team's overall performance.

### PERSONAL DYNAMICS: OBSERVATIONS & CONCLUSIONS

Observations and conclusions are drawn from the data analysis to identify key findings and recommendations. This section highlights the most significant insights and provides actionable advice for improving team dynamics and project outcomes.

### AI PROMPT

The AI prompt was used to generate the report content. It provided a detailed overview of the team's performance and identified key areas for improvement. The AI's analysis is based on the data provided and offers valuable insights into the team's strengths and weaknesses.

## MERGE TEAM REPORT (AI GENERATED)

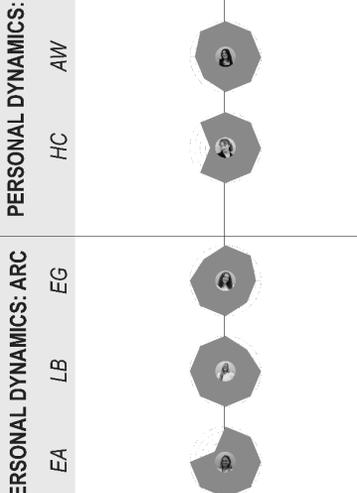

The Merge team report provides a comprehensive overview of the team's performance across various stages of the project. It highlights key strengths, identifies areas for improvement, and offers actionable recommendations. The report is based on a detailed analysis of team activities, communication, and project outcomes.

The team's overall performance was strong, with several key strengths identified. These include excellent communication, effective conflict resolution, and a high level of team cohesion. However, there are also areas for improvement, such as better time management and more consistent communication. The report provides a detailed overview of these findings and offers actionable recommendations for improving team dynamics and project outcomes.

The report also includes a section on individual student reflections. These reflections provide valuable insights into the team's performance from the perspective of individual team members. They highlight the challenges faced, the lessons learned, and the areas for improvement. These reflections are a key component of the team's self-reflection and are used to inform future team activities and project outcomes.

## Critical Milestones

The team's overall performance was strong, with several key strengths identified. These include excellent communication, effective conflict resolution, and a high level of team cohesion. However, there are also areas for improvement, such as better time management and more consistent communication. The report provides a detailed overview of these findings and offers actionable recommendations for improving team dynamics and project outcomes.

## COLLABORATION: DATA ANALYTICS

**PURPOSE**  
This dashboard provides a comprehensive overview of the project's progress, highlighting key milestones, team dynamics, and data analytics. It is designed to facilitate collaboration and data-driven decision-making.

**DATA COLLECTION: TEAM DYNAMICS**  
The data collection process involves gathering information from various sources, including team surveys, project management tools, and direct observations. This data is used to analyze team performance, communication patterns, and overall project health.

**PERSONAL DYNAMICS**  
Personal dynamics refer to the individual characteristics and behaviors of team members. This includes their communication styles, work preferences, and emotional states. Understanding these dynamics is crucial for effective team collaboration.

**DATA COLLECTION: PERSONAL DYNAMICS**  
Data collection for personal dynamics involves using self-reporting tools, such as surveys and interviews, to gather insights into team members' experiences, challenges, and needs. This information is used to tailor support and interventions.

**PERSONAL DYNAMICS: DATA CLUSTERS**  
Data clusters are groups of individuals who share similar characteristics or behaviors. Identifying these clusters helps in understanding common patterns and addressing specific needs within the team.

**OBSERVATIONS & CONCLUSIONS**  
Observations and conclusions are derived from the data collected and analyzed. This process involves identifying trends, patterns, and key findings that inform the project's direction and team's performance.

**AI PROMPT**  
The AI prompt is a set of instructions that guides the AI model in generating content. It includes details about the project context, the user's goals, and the desired output format. The AI model uses this prompt to produce relevant and personalized responses.

## MERGE TEAM REPORT (AI GENERATED)

The Merge team report provides a comprehensive overview of the project's progress, highlighting key milestones, team dynamics, and data analytics. It is designed to facilitate collaboration and data-driven decision-making.

The report includes a detailed analysis of team performance, communication patterns, and overall project health. It also provides insights into individual team members' experiences, challenges, and needs.

Key findings from the report include:

- Strong team collaboration and communication.
- Effective project management and organization.
- High team morale and engagement.
- Successful completion of key milestones.

## Personal Dynamics Across Time

# MERGE COLLABORATION: DATA ANALYTICS

**PURPOSE**  
This report provides a comprehensive overview of the project's progress, highlighting key milestones, challenges, and future goals. It is intended for stakeholders and serves as a communication tool to ensure transparency and alignment across the team.

**DATA COLLECTION: TEAM DYNAMICS**  
The data collection phase involved gathering insights from team members through surveys, interviews, and observations. This process aimed to understand team dynamics, communication patterns, and individual contributions. Key findings include high levels of collaboration and a strong sense of ownership among team members.

**PERSONAL DYNAMICS**  
Individual team members' experiences and perspectives were explored through personal reflections. These insights provided valuable context for the overall team performance and identified areas for personal and professional growth.

**PERSONAL DYNAMICS: DATA CLUSTERS**  
The data analysis phase identified key clusters of information related to team dynamics and personal experiences. These clusters were used to identify trends, patterns, and areas of focus for future interventions and support.

**OBSERVATIONS & CONCLUSIONS**  
Key observations from the data analysis include the importance of clear communication, consistent collaboration, and a supportive team environment. The conclusions drawn from this analysis emphasize the need for ongoing communication and a focus on individual and team growth.

**AI PROMPT**  
The AI prompt was designed to generate a comprehensive report based on the provided data and insights. The prompt included specific instructions regarding the report's structure, content, and tone, ensuring that the generated report accurately reflected the project's progress and findings.

- PERSONAL DYNAMICS**
1. How do you feel about your role in the team? (Reflect on your current role and responsibilities.)
  2. How do you feel about your team's performance? (Reflect on the team's overall performance and individual contributions.)
  3. How do you feel about your team's communication? (Reflect on the team's communication patterns and effectiveness.)
  4. How do you feel about your team's collaboration? (Reflect on the team's collaboration patterns and effectiveness.)
  5. How do you feel about your team's support? (Reflect on the team's support patterns and effectiveness.)
  6. How do you feel about your team's challenges? (Reflect on the team's challenges and how they are being addressed.)
  7. How do you feel about your team's future? (Reflect on the team's future goals and aspirations.)
  8. How do you feel about your team's overall experience? (Reflect on the team's overall experience and satisfaction.)

**PERSONAL DYNAMICS: DATA CLUSTERS**

## INDIVIDUAL STUDENT REFLECTIONS

**EMILY GRISE**  
ARC STRUCTURE  
11-14-25 ARCH

I found the research phase to be a challenging but rewarding experience. It allowed me to explore new ideas and perspectives that I hadn't considered before. The process of gathering and analyzing data was both time-consuming and enlightening. I learned a great deal about the complexities of the project and the importance of thorough research. The feedback from my peers and mentors was invaluable, helping me refine my ideas and improve my work. Overall, the research phase was a crucial part of the project, and I am grateful for the opportunity to engage in this process.

## Personal Reflection

# MERGE

## COLLABORATION: DATA ANALYTICS

### PURPOSE

The purpose of this reflection is to provide a comprehensive overview of the collaborative process, highlighting key challenges, successes, and lessons learned. This document serves as a record of the team's journey, providing insights into the effectiveness of our collaborative efforts and identifying areas for future improvement.

### DATA COLLECTION: TEAM DYNAMICS

The data collection phase involved gathering information on team interactions, communication patterns, and individual contributions. This was achieved through a combination of self-reports, peer observations, and structured interviews, providing a multi-perspective view of the team's dynamics.

### TEAM DYNAMICS

1. Team cohesion and communication patterns.
2. Individual roles and responsibilities within the team.
3. Conflict resolution strategies and effectiveness.
4. Team decision-making processes and outcomes.

Key findings from the data collection phase include the identification of strong communication channels and the emergence of clear roles and responsibilities. However, challenges were noted in the area of conflict resolution, particularly in the early stages of the project.

Overall, the data collection phase provided valuable insights into the team's strengths and areas for improvement, informing the subsequent analysis and recommendations.

### DATA COLLECTION: PERSONAL DYNAMICS

The data collection phase for personal dynamics focused on understanding individual team members' experiences, perceptions, and contributions. This was achieved through structured interviews and self-reflection exercises, providing a deeper understanding of the personal factors influencing team performance.

### PERSONAL DYNAMICS

1. Individual roles and responsibilities within the team.
2. Personal strengths and weaknesses.
3. Challenges faced by individual team members.
4. Support and resources available to individual team members.

Key findings from the personal dynamics data collection phase include the identification of individual strengths and weaknesses, and the recognition of the support and resources available to team members. This information was used to tailor interventions and support to address individual needs.

Overall, the personal dynamics data collection phase provided valuable insights into the individual experiences and contributions of team members, informing the subsequent analysis and recommendations.

### PERSONAL DYNAMICS: DATA CLUSTERS

The data clusters analysis identified patterns and themes within the personal dynamics data, highlighting key areas of strength and challenge. This analysis was conducted using statistical techniques and qualitative analysis, providing a more nuanced understanding of the data.

### PERSONAL DYNAMICS: DATA CLUSTERS

1. Communication and collaboration.
2. Individual roles and responsibilities.
3. Conflict resolution and problem-solving.
4. Team decision-making and leadership.

Key findings from the data clusters analysis include the identification of strong communication and collaboration patterns, and the recognition of individual roles and responsibilities. This information was used to inform the subsequent analysis and recommendations.

Overall, the data clusters analysis provided valuable insights into the patterns and themes within the personal dynamics data, informing the subsequent analysis and recommendations.

### OBSERVATIONS & CONCLUSIONS

The observations and conclusions phase involved synthesizing the findings from the data collection and analysis phases. This phase identified key themes and insights, providing a comprehensive overview of the team's performance and the effectiveness of the collaborative process.

### OBSERVATIONS & CONCLUSIONS

1. Key themes and insights from the data collection and analysis phases.
2. Strengths and weaknesses of the team's performance.
3. Recommendations for future improvement.
4. Lessons learned from the collaborative process.

Key findings from the observations and conclusions phase include the identification of key themes and insights, and the recognition of the team's strengths and weaknesses. This information was used to inform the subsequent analysis and recommendations.

Overall, the observations and conclusions phase provided a comprehensive overview of the team's performance and the effectiveness of the collaborative process, informing the subsequent analysis and recommendations.

### AI PROMPT

The AI prompt was used to generate a summary of the findings from the data collection and analysis phases. This prompt was designed to be clear and concise, providing the AI with the necessary information to generate a high-quality summary.

### AI PROMPT

Generate a summary of the findings from the data collection and analysis phases, highlighting key themes and insights. The summary should be clear, concise, and easy to read, providing a comprehensive overview of the team's performance and the effectiveness of the collaborative process.

The AI prompt was used to generate a summary of the findings from the data collection and analysis phases. This prompt was designed to be clear and concise, providing the AI with the necessary information to generate a high-quality summary.

Overall, the AI prompt provided a high-quality summary of the findings from the data collection and analysis phases, informing the subsequent analysis and recommendations.

You are serving as an objective evaluator synthesizing a set of individual 300-word reflection essays written by members of a cross-disciplinary architecture studio team. Each reflection responds to the following questions: What patterns or trends do you notice about your performance and mindset throughout the semester? What did you learn about working in a cross-disciplinary team, particularly in understanding perspectives outside of your own discipline? How did your awareness of team dynamics and your own behavior shape the creative process and outcomes? Considering all your observations, what insights will you carry forward into future academic or professional projects?

Using the text of all team members' reflections, write a 1,000-word summary and analysis that: Synthesizes broad conclusions and identifies key patterns or recurring themes across all reflections, highlights both individual and collective observations about collaboration, leadership, communication, and professional growth, identifies the team's strengths (what they did well, how they supported each other, where they excelled), identifies the team's weaknesses or challenges (recurring difficulties, gaps in process, or areas for improvement), and the design process, and offers advice and recommendations for how this team could continue to grow and work more effectively in future academic or professional settings. Your tone should be objective, professional, and reflective, similar to a post-project report or evaluation written for an academic design studio. Avoid favoring any single person's perspective; instead, look for collective meaning and common threads that define the team's experience.

## AI Prompt for Team Report

## INDIVIDUAL STUDENT REFLECTIONS

**EMILY GRISE**

11-14-2024

I found the semester to be a period of intense growth and learning. The collaborative process was challenging, but it allowed me to develop my skills in a way that I couldn't have otherwise. I learned a great deal about myself and my team, and I am proud of what we accomplished. The experience was both rewarding and demanding, and it has shaped my perspective on teamwork and professional growth. I will carry these lessons with me as I continue to grow and learn in my field.

**LUCY BUELL**

The semester has been a journey of discovery and collaboration. I have learned so much from my teammates and from the experience itself. The challenges we faced were not insurmountable, and our collective effort led to a successful outcome. I am grateful for the support and encouragement of my team and for the opportunity to work in a cross-disciplinary environment. This experience has shown me the power of teamwork and the importance of communication in achieving our goals.

**ELIZA AGNEW**

11-14-2024

Reflecting on the semester, I am struck by the resilience and creativity of our team. We faced numerous challenges, but our commitment to the project and to each other kept us moving forward. The collaborative process was a learning experience in itself, and I am proud of the work we produced. This experience has reinforced my belief in the power of teamwork and the importance of clear communication. I will continue to strive for excellence in my professional life, drawing on the lessons I learned during this semester.

## COLLABORATION: DATA ANALYTICS

### PERSONAL DYNAMICS: TEAM DYNAMICS

**DATA COLLECTION: PERSONAL DYNAMICS**

The team members collected data on their own and their team's performance throughout the semester. This data was used to identify patterns in team dynamics and individual contributions. The data was collected through various methods, including self-reflection, peer feedback, and team observations.

- 1. Team members collected data on their own and their team's performance throughout the semester.
- 2. This data was used to identify patterns in team dynamics and individual contributions.
- 3. The data was collected through various methods, including self-reflection, peer feedback, and team observations.

**PERSONAL DYNAMICS: DATA CLUSTERS**

The team members identified clusters of data that represented different aspects of their team's performance. These clusters were used to identify strengths and weaknesses in team dynamics and individual contributions.

- 1. Team members identified clusters of data that represented different aspects of their team's performance.
- 2. These clusters were used to identify strengths and weaknesses in team dynamics and individual contributions.
- 3. The data was collected through various methods, including self-reflection, peer feedback, and team observations.

**OBSERVATIONS & CONCLUSIONS**

The team members observed and concluded that their team's performance was strong in certain areas and weak in others. They identified key factors that influenced their team's success and areas for improvement.

- 1. Team members observed and concluded that their team's performance was strong in certain areas and weak in others.
- 2. They identified key factors that influenced their team's success and areas for improvement.
- 3. The data was collected through various methods, including self-reflection, peer feedback, and team observations.

You are serving as an objective evaluator synthesizing a set of individual 300-word reflection essays written by members of a cross-disciplinary architecture studio team. Each reflection responds to the following questions: What patterns or trends do you notice about your performance and mindset throughout the semester? What did you learn about working in a cross-disciplinary team, particularly in a cross-disciplinary architecture studio team? How did your awareness of team dynamics and your own behavior shape the creative process and outcomes? Considering all your observations, what insights will you carry forward into future academic or professional projects?

Using the text of all team members' reflections, write a 1,000-word summary and analysis that: Synthesizes broad conclusions and identifies key patterns or recurring themes across all reflections, highlights both individual and collective observations about collaboration, leadership, communication, and professional growth, identifies the team's strengths (what they did well, how they supported each other, where they excelled), identifies the team's weaknesses or challenges (recurring difficulties, gaps in process, or areas for improvement), describes lessons learned and insights about teamwork, interdisciplinary collaboration, and the design process, and offers advice and recommendations for how this team could continue to grow and work more effectively in future academic or professional settings. Your tone should be objective, professional, and reflective, similar to a post-project report or evaluation written for an academic design studio. Avoid favoring any single person's perspective; instead, look for collective meaning and common threads that define the team's experience.

### INDIVIDUAL STUDENT REFLECTIONS

**EMILY GRISE**  
ARCHITECTURE  
11-14-2024

I thought the semester was a mix of challenges and growth. I learned a lot about myself and my team. We worked together to overcome many obstacles, and I feel like we grew as a team. I also learned a lot about my own strengths and weaknesses. I think I did well in some areas, but I also know I need to improve in others. Overall, I think the semester was a great experience, and I'm proud of what we accomplished.

- 2. The prompt was designed to elicit specific information about team dynamics and individual contributions.
- 3. The data was collected through various methods, including self-reflection, peer feedback, and team observations.

# AI Generated Team Report: Example

Over the course of the semester, the team's collective reflections reveal a narrative of growth, adaptability, and increasing self-awareness in both individual and collaborative dimensions. While each member experienced the process differently, several consistent themes emerge—chief among them a deepening appreciation for the complexities of interdisciplinary collaboration, the challenge of managing competing priorities, and the evolution of leadership and empathy as defining traits of effective teamwork in design practice.

## Patterns and Trends in Performance and Mindset

A consistent pattern across reflections is the shift from early uncertainty to increasing confidence and clarity. Several students described starting the semester with strong organization and energy, which later fluctuated as the workload intensified. Others noted feeling intimidated or unsure of their abilities at the outset, particularly when comparing themselves to peers from different disciplines. These early doubts gradually diminished as the semester progressed and students recognized their own strengths. Across the board, reflections showed that major deadlines—particularly mid-crit and the final review—introduced predictable decreases in personal well-being, time for other courses, and work-life balance. Yet this decline did not correspond to diminished design quality; in fact, many noted that their precision, clarity, and craftsmanship improved under pressure. This suggests a team capable of high-level performance, though sometimes at the expense of sustainable habits. Another meaningful trend was the evolution of self-awareness. Students became increasingly attuned to how their emotional states, confidence levels, and communication styles influenced the overall process. Several individuals reflected on perfectionist tendencies, difficulty delegating, or hesitation to voice ideas—patterns they began to better understand and regulate as the semester unfolded.

## Learning Through Cross-Disciplinary Collaboration

The cross-disciplinary framework was central to the team's development. Architecture and interior design students frequently commented on the differences in terminology, visualization methods, and design priorities that initially created tension or uncertainty. However, these differences quickly became a catalyst for expanded thinking. Multiple reflections emphasized how exposure to unfamiliar approaches enriched the project: architects gained insight into materiality and detail, while interior designers learned to think more broadly about structure and spatial strategy. Students described learning to translate their ideas more clearly, avoiding assumptions about shared knowledge, and becoming more intentional about communication. Importantly, none of the reflections framed disciplinary difference as a barrier by the end of the project. Instead, students saw it as an asset that strengthened the final design. Several highlighted the realization that expertise is distributed, not hierarchical—an especially meaningful insight for those who initially felt intimidated by peers in other disciplines.

## Team Dynamics and Emotional Intelligence

A major theme across all reflections is the team's emphasis on emotional intelligence. Students repeatedly noted the stabilizing effect of healthy communication, empathy, and shared positivity. Even when individuals struggled personally—whether through stress, lack of confidence, or fluctuating energy—the team dynamic provided balance. Members described checking in on one another, redistributing work when needed, and maintaining a tone of optimism. This consistent emotional support became a defining feature of the group and contributed significantly to their collective success. Reflections also revealed a willingness to engage in disagreement productively. Design debates occurred, but students reported that they were handled through open discussion and compromise rather than conflict. This fostered a collaborative climate where members felt respected and valued. Furthermore, students admitted vulnerabilities—fear of not measuring up, difficulty maintaining routines, or anxiety about presenting work. The team responded with encouragement and understanding, which helped individuals grow more confident and resilient. This increased transparency reflects a high level of interpersonal maturity and strengthened trust within the group.

## Strengths and Weaknesses of the Team

Strong communication and emotional awareness. Students consistently described the team as supportive, encouraging, and attentive to interpersonal needs. Adaptability. The group was willing to adjust roles, refine communication strategies, and revise design decisions when necessary. Commitment to quality. Regardless of stress or time pressure, each member was dedicated to producing thoughtful, well-crafted work. Interpersonal respect. The team embraced disciplinary differences and treated conflicts as opportunities for refinement rather than division. Resilience. Despite fluctuating confidence levels or moments of burnout, the team delivered a coherent and integrated final project. These strengths suggest a team with high collaborative potential and a well-developed foundation in professional interpersonal skills. The reflections also indicate several recurring challenges: Time management and work-life balance. Many students reported sacrificing sleep, personal time, or other coursework to meet deadlines. This pattern, while common in design education, highlights a need for more sustainable pacing and planning. Uneven confidence and self-advocacy. Some members struggled early in the semester to voice ideas or trust their skills. Although this improved over time, it indicates a need for clearer support structures early in the project. Communication rhythms. While overall communication was strong, several reflections mentioned moments when coordination lagged—often during transitions between major project phases. Perfectionism and overcommitment. A few team members described difficulty relinquishing control or balancing high standards with realistic time constraints. These challenges do not diminish the team's accomplishments but highlight opportunities for growth.

## Lessons Learned and Moving Forward

Collectively, the team identified several lessons that will benefit future academic and professional work: Productive collaboration requires intentional communication. Regular check-ins, clear delegation, and transparency about workload and stress levels are essential. Interdisciplinary work broadens design capacity. Listening across disciplines, learning unfamiliar tools or methods, and integrating varied perspectives deepen the design outcome. Emotional intelligence is a core professional skill. Awareness of others' stress, encouragement during difficult moments, and maintaining positivity increase team cohesion and creativity. Self-regulation matters. Healthy routines, time management, and boundary-setting directly influence the quality of both work and teamwork. Confidence grows through practice and support. Many learned that contributing ideas—even imperfect ones—is central to the design process. To continue advancing as a collaborative team, the following strategies are recommended: Establish structured communication systems early. Weekly agendas, role assignments, and shared tracking tools can reduce last-minute stress and uneven workloads. Normalize early discussion of strengths and insecurities. This helps balance contributions and promotes psychological safety from the outset. Build sustainable work habits. Setting realistic internal deadlines and encouraging each other to take breaks can improve well-being and long-term output. Leverage disciplinary difference intentionally. Plan specific moments for cross-disciplinary critique to ensure both architectural and interior perspectives are consistently integrated. Maintain reflective practice. Continual self-assessment—individually and as a group—will help the team identify issues before they escalate.

Many learned that contributing ideas—even imperfect ones—is central to the design process. To continue advancing as a collaborative team, the following strategies are recommended: Establish structured communication systems early. Weekly agendas, role assignments, and shared tracking tools can reduce last-minute stress and uneven workloads. Normalize early discussion of strengths and insecurities. This helps balance contributions and promotes psychological safety from the outset. Build sustainable work habits. Setting realistic internal deadlines and encouraging each other to take breaks can improve well-being and long-term output. Leverage disciplinary difference intentionally. Plan specific moments for cross-disciplinary critique to ensure both architectural and interior perspectives are consistently integrated. Maintain reflective practice. Continual self-assessment—individually and as a group—will help the team identify issues before they escalate.

*Even when individuals struggled personally—whether through stress, lack of confidence, or fluctuating energy—the team dynamic provided balance.*

*Members described checking in on one another, redistributing work when needed, and maintaining a tone of optimism. This consistent emotional support became a defining feature of the group and contributed significantly to their collective success.*

# AI Generated Team Report: Example

Over the course of the semester, the team's collective reflections reveal a narrative of growth, adaptability, and increasing self-awareness in both individual and collaborative dimensions. While each member experienced the process differently, several consistent themes emerge—chief among them a deepening appreciation for the complexities of interdisciplinary collaboration, the challenge of managing competing priorities, and the evolution of leadership and empathy as defining traits of effective teamwork in design practice.

## Patterns and Trends in Performance and Mindset

A consistent pattern across reflections is the shift from early uncertainty to increasing confidence and clarity. Several students described starting the semester with strong organization and energy, which later fluctuated as the workload intensified. Others noted feeling intimidated or unsure of their abilities at the outset, particularly when comparing themselves to peers from different disciplines. These early doubts gradually diminished as the semester progressed and students recognized their own strengths. Across the board, reflections showed that major deadlines—particularly mid-crit and the final review—introduced predictable decreases in personal well-being, time for other courses, and work-life balance. Yet this decline did not correspond to diminished design quality; in fact, many noted that their precision, clarity, and craftsmanship improved under pressure. This suggests a team capable of high-level performance, though sometimes at the expense of sustainable habits. Another meaningful trend was the evolution of self-awareness. Students became increasingly attuned to how their emotional states, confidence levels, and communication styles influenced the overall process. Several individuals reflected on perfectionist tendencies, difficulty delegating, or hesitation to voice ideas—patterns they began to better understand and regulate as the semester unfolded.

## Learning Through Cross-Disciplinary Collaboration

The cross-disciplinary framework was central to the team's development. Architecture and interior design students frequently commented on the differences in terminology, visualization methods, and design priorities that initially created tension or uncertainty. However, these differences quickly became a catalyst for expanded thinking. Multiple reflections emphasized how exposure to unfamiliar approaches enriched the project: architects gained insight into materiality and detail, while interior designers learned to think more broadly about structure and spatial strategy. Students described learning to translate their ideas more clearly, avoiding assumptions about shared knowledge, and becoming more intentional about communication. Importantly, none of the reflections framed disciplinary difference as a barrier by the end of the project. Instead, students saw it as an asset that strengthened the final design. Several highlighted the realization that expertise is distributed, not hierarchical—an especially meaningful insight for those who initially felt intimidated by peers in other disciplines.

## Team Dynamics and Emotional Intelligence

A major theme across all reflections is the team's emphasis on emotional intelligence. Students repeatedly noted the stabilizing effect of healthy communication, empathy, and shared positivity. Even when individuals struggled personally—whether through stress, lack of confidence, or fluctuating energy—the team dynamic provided balance. Members described checking in on one another, redistributing work when needed, and maintaining a tone of optimism. This consistent emotional support became a defining feature of the group and contributed significantly to their collective success. Reflections also revealed a willingness to engage in disagreement productively. Design debates occurred, but students reported that they were handled through open discussion and compromise rather than conflict. This fostered a collaborative climate where members felt respected and valued. Furthermore, students admitted vulnerabilities—fear of not measuring up, difficulty maintaining routines, or anxiety about presenting work. The team responded with encouragement and understanding, which helped individuals grow more confident and resilient. This increased transparency reflects a high level of interpersonal maturity and strengthened trust within the group.

## Strengths and Weaknesses of the Team

Strong communication and emotional awareness. Students consistently described the team as supportive, encouraging, and attentive to interpersonal needs. Adaptability. The group was willing to adjust roles, refine communication strategies, and revise design decisions when necessary. Commitment to quality. Regardless of stress or time pressure, each member was dedicated to producing thoughtful, well-crafted work. Interpersonal respect. The team embraced disciplinary differences and treated conflicts as opportunities for refinement rather than division. Resilience. Despite fluctuating confidence levels or moments of burnout, the team delivered a coherent and integrated final project. These strengths suggest a team with high collaborative potential and a well-developed foundation in professional interpersonal skills. The reflections also indicate several recurring challenges: Time management and work-life balance. Many students reported sacrificing sleep, personal time, or other coursework to meet deadlines. This pattern, while common in design education, highlights a need for more sustainable pacing and planning. Uneven confidence and self-advocacy. Some members struggled early in the semester to voice ideas or trust their skills. Although this improved over time, it indicates a need for clearer support structures early in the project. Communication rhythms. While overall communication was strong, several reflections mentioned moments when coordination lagged—often during transitions between major project phases. Perfectionism and overcommitment. A few team members described difficulty relinquishing control or balancing high standards with realistic time constraints. These challenges do not diminish the team's accomplishments but highlight opportunities for growth.

## Lessons Learned and Moving Forward

Collectively, the team identified several lessons that will benefit future academic and professional work: Productive collaboration requires intentional communication. Regular check-ins, clear delegation, and transparency about workload and stress levels are essential. Interdisciplinary work broadens design capacity. Listening across disciplines, learning unfamiliar tools or methods, and integrating varied perspectives deepen the design outcome. Emotional intelligence is a core professional skill. Awareness of others' stress, encouragement during difficult moments, and maintaining positivity increase team cohesion and creativity. Self-regulation matters. Healthy routines, time management, and boundary-setting directly influence the quality of both work and teamwork. Confidence grows through practice and support. Many learned that contributing ideas—even imperfect ones—is central to the design process. To continue advancing as a collaborative team, the following strategies are recommended: Establish structured communication systems early. Weekly agendas, role assignments, and shared tracking tools can reduce last-minute stress and uneven workloads. Normalize early discussion of strengths and insecurities. This helps balance contributions and promotes psychological safety from the outset. Build sustainable work habits. Setting realistic internal deadlines and encouraging each other to take breaks can improve well-being and long-term output. Leverage disciplinary difference intentionally. Plan specific moments for cross-disciplinary critique to ensure both architectural and interior perspectives are consistently integrated. Maintain reflective practice. Continual self-assessment—individually and as a group—will help the team identify issues before they escalate.

*The reflections also indicate several recurring challenges:*

## *Uneven confidence and self-advocacy.*

*Some members struggled early in the semester to voice ideas or trust their skills. Although this improved over time, it indicates a need for clearer support structures early in the project.*

Why is this important?

# GREEN-HOUSE

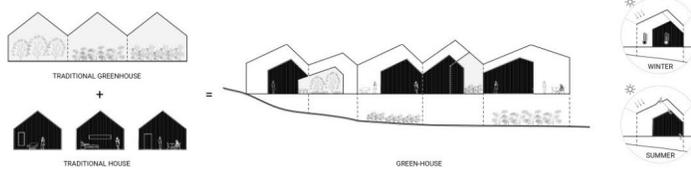

Located on one of the last extant floricultural properties in San Francisco, this project seeks to honor the history of the site, which was once home to a traditional greenhouse central to the community. In reimagining the space, the central question is: How to create a new space that addresses the community's evolving needs while preserving the spirit of connection that has defined this place?

Our proposal introduces a new architectural typology—the "green-house". This concept holds three significant meanings:

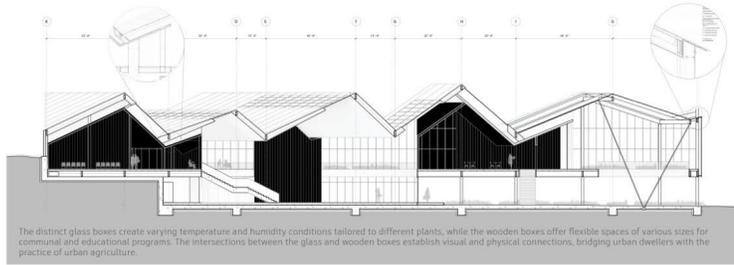

- 1. A Tribute to Form:** Drawing inspiration from the traditional greenhouse, the new structure recalls the site's agricultural roots.
- 2. A Connection to Nature:** within the building, living space fosters a more integrated relationship between people and the natural environment.
- 3. Sustainability:** The green-house is not only a symbolic form, but an active system that enhances building performance. During the winter, the greenhouse effect naturally help warming the interior. In the summer, the temperature difference between the roof and the shaded ground level promotes natural ventilation.

STREET VIEW

The project reexamines the "greenhouse" typology by juxtaposing two distinct types of spaces: **wooden boxes** (community spaces) and **glass boxes** (urban agriculture spaces). Both are enclosed within a translucent shell constructed from solid corrugated polycarbonate, forming a double-layered skin for the building. During winter, this double-layered structure creates a greenhouse effect between the outer shell and the internal boxes, preheating the air within the building. In summer, the temperature difference between the roof and the shaded ground level promotes natural ventilation, enhancing the building's environmental performance.

The distinct glass boxes create varying temperature and humidity conditions tailored to different plants, while the wooden boxes offer flexible spaces of various sizes for communal and educational programs. The intersections between the glass and wooden boxes establish visual and physical connections, bridging urban dwellers with the practice of urban agriculture.

# VELLUM

breeze stage pavilion

## CONCEPT

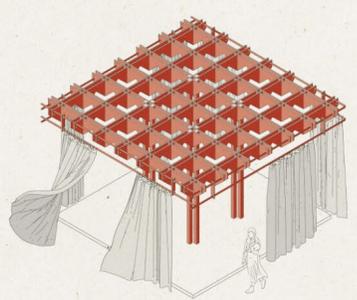

This proposal aims to create a striking wooden installation designed to enhance the festival experience both aesthetically and functionally. Made from prefabricated wooden panels, Vellum optimizes material use and reduces processing and assembly time, while maintaining strong structural integrity. The frame supports a dynamic curtain that mimics natural sounds, blending into the environment. Reflective materials and complementary colors guide attendees and highlight festival focal points. The modular design includes two stages and a bar, adaptable to various events and audience needs, creating a harmonious connection between architecture and nature.

## ADAPTABILITY

The two stages are variations of the same construction system, designed to suit different audience placements and performance types. Their adaptable design makes them suitable for a wide range of concerts and shows, centrally oriented, with a radial audience or unidirectional, from a single perspective. The structure itself adapts to the terrain, allowing young trees to cross it or building around them.

## SUSTAINABILITY

Vellum focuses on sustainability by using recycled, moisture-resistant and fireproof treated plywood modules. Prefabricated panels cut from large 1220x2440x18mm boards minimize waste and optimize resource efficiency. Modular furniture, including seating and bar components, ensures eco-friendly, durable spaces for festival attendees. Cabinets are made from simple plywood, designed for quick assembly and reuse due to short-term use.

## MODULARITY

### Seating Elements & Additional furniture

The seating modules can be configured as individual chairs or assembled into more complex setups, such as the main bar counter or a DJ booth area. This versatility ensures that the furniture can meet various functional requirements throughout the festival. The bar area is a central gathering point, offering essential services through its own structure. Part of the same modular family, it attracts people and enhances the festival experience.

### 2.1 & 2.2 modules

column support node joint

large square joint

complementary module joining system

wooden support pillar square section 100x100mm, 3 to 25 m high

group of structural elements - modular grid mesh

storage cabinet with sliding doors and cabinet doors - contains 4 chairs 4.1 and 4 pieces 4.2 in adjacent pairs (bar and sub-mixing panel)

## SEASIDE PAVILION

This is a seaside pavilion located by the roadside of a circular island route, which island residents and tourists pass through. It serves as a place for gatherings and sea-watching. The installation consists of 140 blades that can open and close under the influence of tides, creating a slow and sequential dance of wings.

Corresponding to the tidal moments of the Zhoushan Sea, during the day, the wings remain closed. The installation forms a permeable structure measuring 3x3x10 meters. In the morning and evening when the tide rises, driven by floating buoys, the wings gradually open, creating a romantic and magical scene. This is the image we want to present: a person sitting in the pavilion, watching the sunrise and sunset over the sea, surrounded by white wings, waves, and the glow of twilight, all coming together like a painting.

The wings' material is elastic fabric membrane, allowing ventilation and reducing wind resistance. The power system consists of floating buoys, ropes, pulleys, and counterweight bars, among other components.

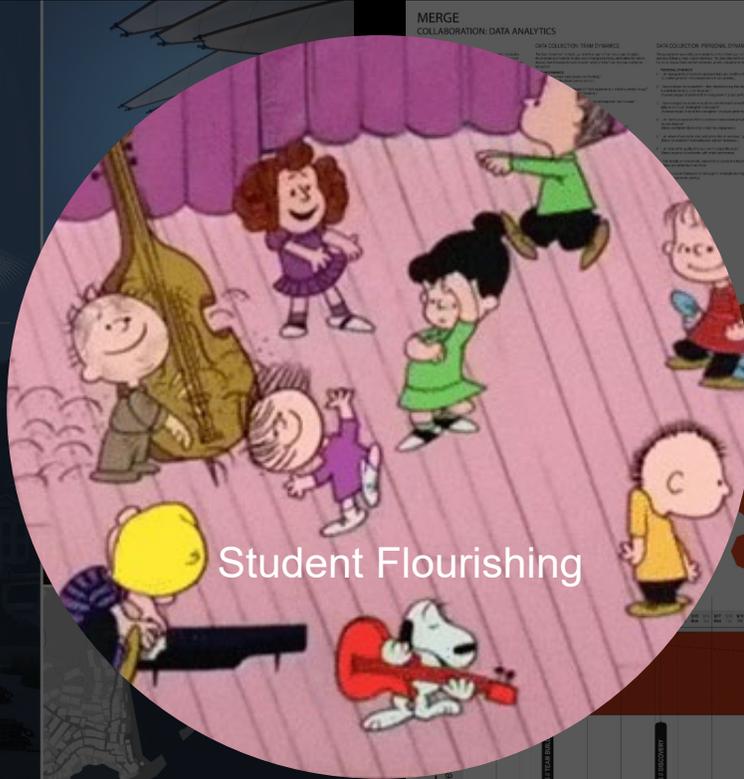

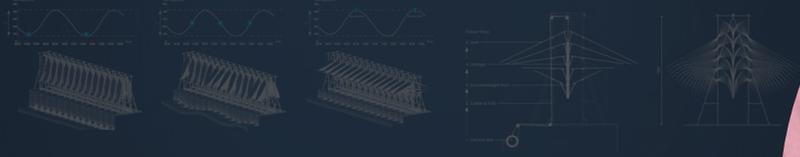

## SEASIDE PAVILION

This is a seaside pavilion located by the roadside of a circular island route, which island residents and tourists pass through. It serves as a place for gathering and sun-watching. The installation consists of 140 blades that can open and close under the influence of tides, creating a slow and sequential dance of wings.

## MERGE COLLABORATION: DATA ANALYTICS

### DATA COLLECTOR: TEAM DYNAMICS

Team dynamics are the interactions and relationships between team members that influence the team's performance. Key factors include communication, trust, and shared goals.

### DATA COLLECTOR: PERSONAL DYNAMICS

Personal dynamics refer to individual team members' characteristics, such as their skills, personality, and motivation, which contribute to the overall team performance.

### PERSONAL DYNAMICS: SKILL CLUSTERS

### OBSERVATIONS & CONCLUSIONS

Observations and conclusions from the data analysis. The team's performance is positively impacted by strong communication and shared goals, while individual differences in skills and motivation also play a significant role.

### AI PROMPT

AI prompts used for data analysis. The prompts were designed to extract specific information from the data, such as team dynamics and personal dynamics.

## MERGE TEAM REPORT (AI GENERATED)

AI-generated team report content, including an executive summary and detailed findings.

# AI & DATA INTEGRATION FOR CROSS-DISCIPLINARY COLLABORATION

IDS Methodology & Process

IDS Iteration 1

IDS Iteration 2

Workshop

Discussion

**AI & DATA INTEGRATION**

FOR CROSS-DISCIPLINARY COLLABORATION

**WORKSHOP**

# 1

## GOALS

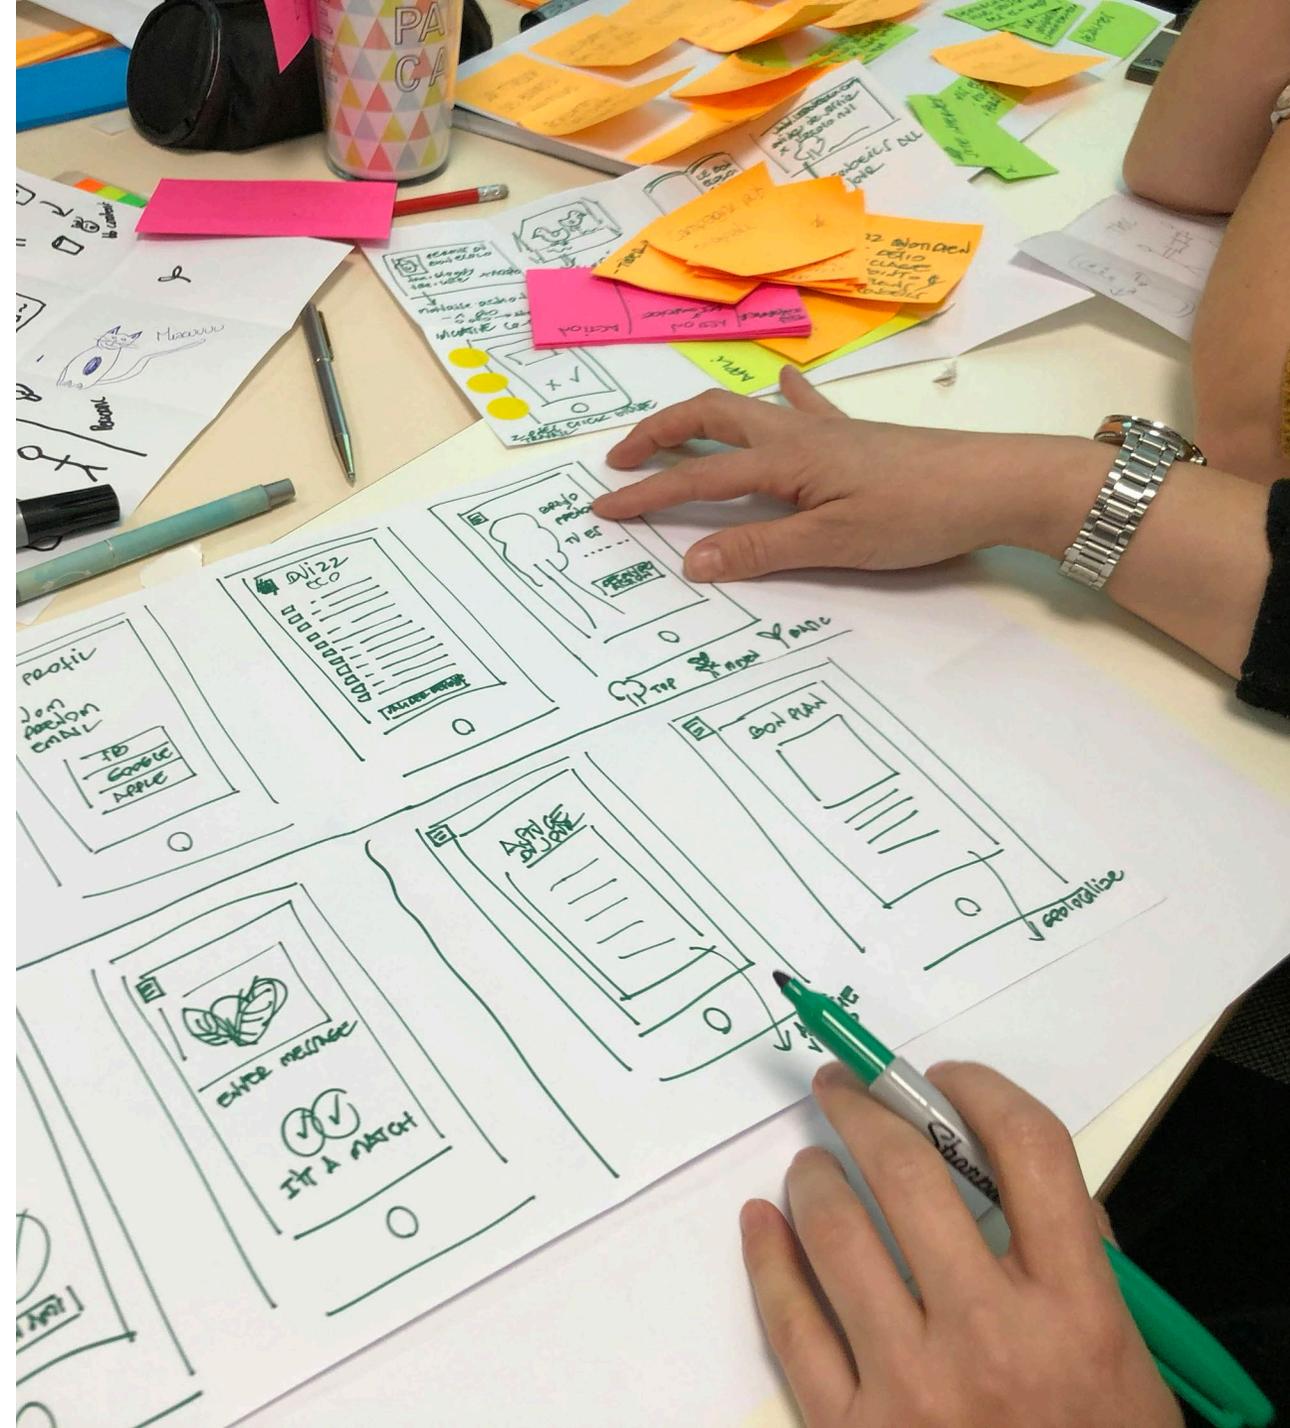

**Consider how leveraging AI, Data Collection, and Data Visualization could improve one of the courses you teach in the following areas:**

Student outcomes

Pedagogy and/or methodology

Scholarship development

[5 Minutes]

# 2 DESCRIBE

**Briefly describe your improvement goals to the rest of your table in the context of:**

Leveraging AI

Data Collection

Data Visualization

[2 Minutes Each]

# 3

## FEEDBACK

**Provide feedback to each other.  
Consider the following topics:**

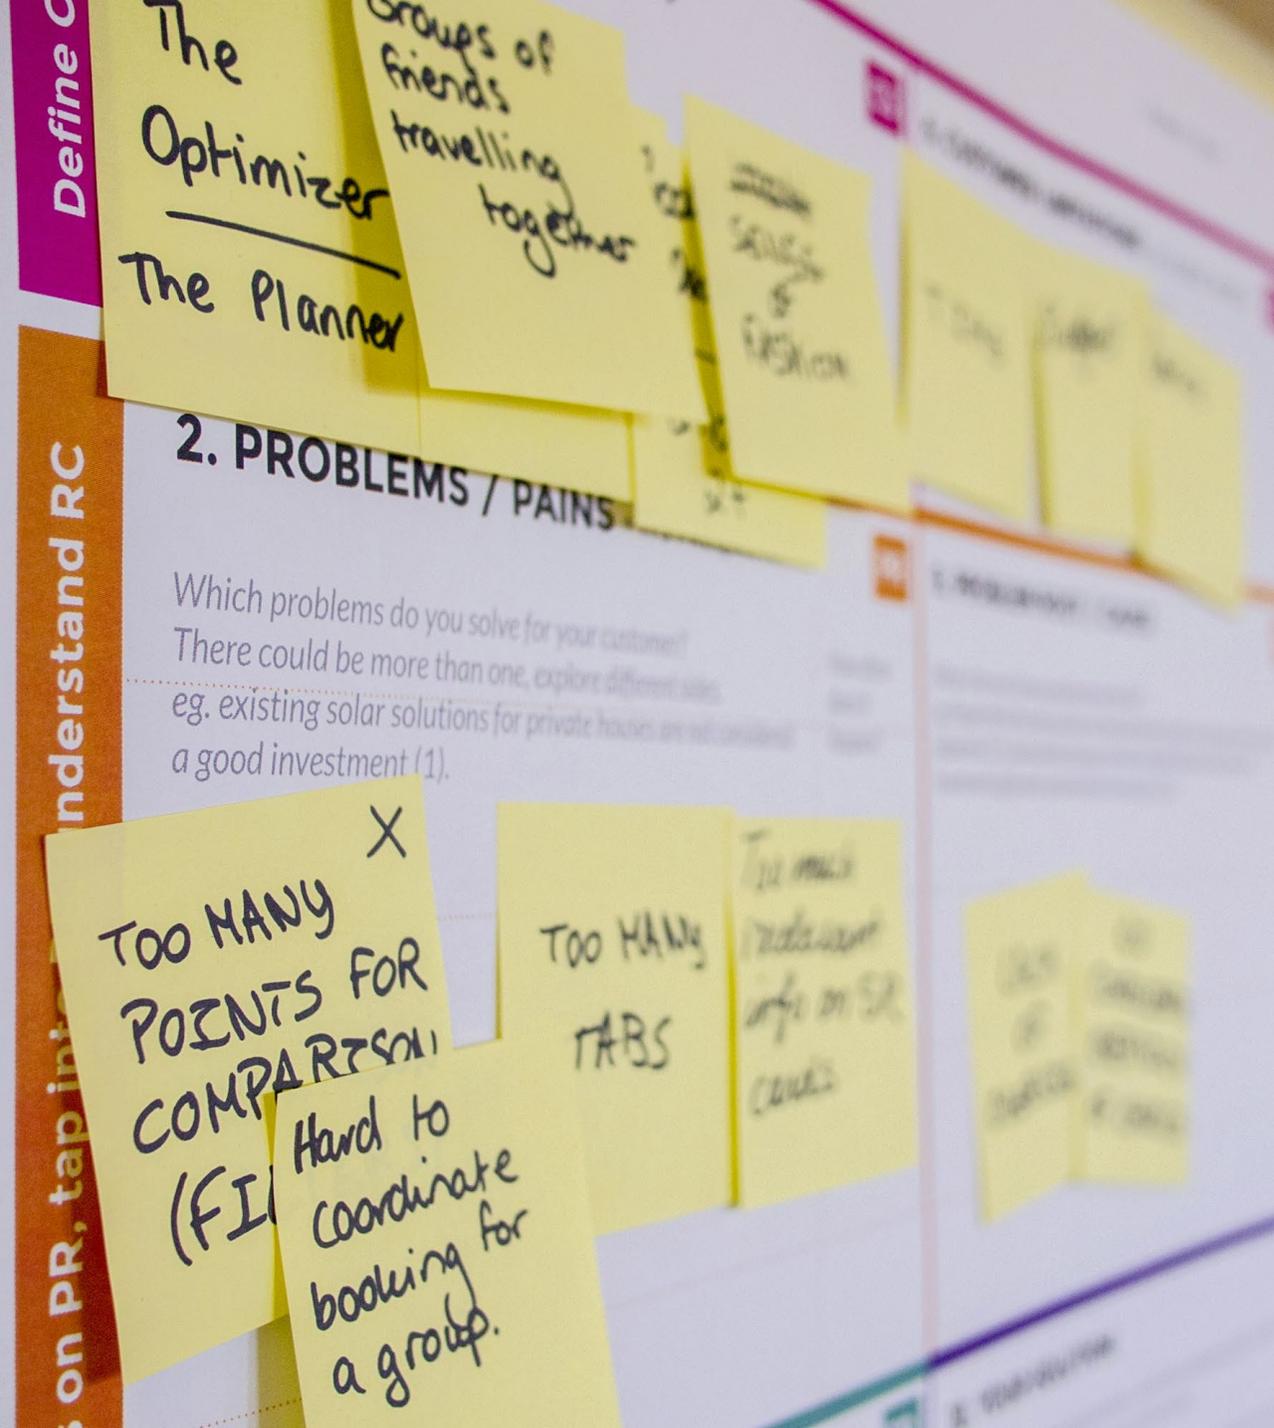

Types of data needed

Student perceptions

Data visualization in support of desired outcomes

Conclusions drawn from the data over time

[2 Minutes Each]

# 4 SHARE

**Select 1 person from the table to share with the room about their course improvement plan.**

Briefly describe course improvement ideas

Share the group's feedback & suggestions

Initial implementation ideas

[3 Minutes Each]

**AI & DATA INTEGRATION**
